DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to electronic digital logic circuitry, classified in class 326, subclass 40.
 - II. Claims 15-20 and 24-26, drawn to error detection/correction and fault detection/recovery, classified in class 714, subclass 724.
 - III. Claims 21-23, drawn to static information and retrieval, classified in class 365, subclass 189.01.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the programmable logic device comprising a configurable logic block is not intended to be used with an apparatus for error checking or to be used with a method for reading back of data.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, the search for group II is not

required for group III, and the search for group III is not required for group I, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
